EDUCATION

Guangdong University of Technology
Chinese language studies
since October 2026

Harvard CS50 (edX)
Introduction to Computer Science
in progress

Baccalauréat, series D
Science, Brazzaville
2019

SKILLS

In production
JavaScript, HTML, CSS, React, Astro,
PHP, WordPress, SQL, Nginx

Learning
Python, C

Tools
Git, GitHub, Docker, coding agents
(Claude Code), MCP

LANGUAGES

French (native) · English (professional) ·
Spanish (professional) · Chinese
(learning)

PROFILE

I turn real problems into tools people use every day: official websites, web applications and AI tools for institutions and organisations. I have led projects end to end, from architecture to launch, in Congo, Cuba and France.

EXPERIENCE

Founder · Amani AI Lab since June 2025
Websites, platforms and automations for institutions and businesses.

Intern · Embassy of the Republic of Congo in Cuba April to June 2026
45-day rotation across the mission; digital archiving database; official embassy website.

Founder · Brazza Gaming 2020 to 2021
Video game and virtual reality centre in Brazzaville.

PROJECTS

Embassy of Congo in Cuba Live
The official site of a diplomatic mission, in French and Spanish: procedures, news, forms. The embassy team updates it on its own.
Design, development, deployment · WordPress, PHP, MySQL, Nginx

Grande Chancellerie des Ordres Nationaux New address soon
The site of a state institution: its mission, national honours, a museum. Next: finding any recipient in a database.
Design, development · React, Vite, SEO

Bybilo Institution In development
A school management platform, web and mobile: sixteen modules, from enrolment to accounting.
Technical project manager: stack, architecture, tooling · Django, React, PostgreSQL

MAYELE Private
My personal AI agent system: Markdown memory, custom skills, rules and automations.
Design, development · Claude Code, MCP, Markdown, Git

Allo Pizza 30 Delivered
A pizzeria website: a menu that reads on a phone, ordering in fewer taps.
Design, development · React

AI watch pipeline Used every day
A link shared from my iPhone becomes a note: the video is downloaded, transcribed by Whisper, then sorted by topic. No manual step.
Design, development · Python, Whisper, yt-dlp, ffmpeg
